Sri Vignesh R

Aspiring Full Stack/ML Engineer

vigneshsri058@gmail.com +91-9360538154 Linkedin GitHub CodeChef Leetcode

AI & Data Science undergraduate with industry internship experience in AI/ML and full-stack development. Skilled in predictive modeling, NLP, explainable AI, and building scalable web applications, with achievements in technical hackathons and research presentations.

EDUCATION

B.Tech Artificial Intelligence and Data Science 2024 – 2028 | Coimbatore
KPR Institute of Engineering and Technology
CGPA: 9.1

TECHNICAL SKILLS

Programming Languages: Python, Java, C, JavaScript, TypeScript, SQL
AI/ML: Machine Learning, Deep Learning, NLP, Computer Vision, Model Fine-Tuning, Feature Engineering
Model Development: Cross-Validation, Model Validation, Hyperparameter Tuning, Model Evaluation, Ensemble Learning, SHAP
Frameworks & Libraries: Scikit-learn, PyTorch, LightGBM, XGBoost, Sentence Transformers, RDKit
Full-Stack Development: React.js, FastAPI, Node.js, Express.js, REST APIs
Databases & Tools: PostgreSQL, MongoDB, MySQL, Git, GitHub, Docker, VS Code, PyCharm

EXPERIENCE

Software Developer Intern, ECLearnix Edtech Private Limited 03/2026 – 04/2026 | Onsite
- Developed DocForge, an AI-powered document automation system using Python and FastAPI to process research papers and generate publication-ready documents.
- Integrated Sentence Transformers, PyMuPDF, and python-docx for semantic content matching, document parsing, and automated template conversion.

Artificial Intelligence Intern, Infosys Springboard 06/2026 – 09/2026 | Remote
- Evaluated 13 machine learning algorithms for predictive maintenance, achieving 98.90% accuracy and 97.56% ROC-AUC with LightGBM.
- Developed a full-stack failure detection system with SHAP explainability, five failure modes, secure REST APIs, React, MongoDB, and Docker.

PROJECTS

CVlect AI – Explainable AI-Powered Recruitment Platform
Built an AI-powered recruitment platform with NLP-based resume parsing, semantic job matching, explainable candidate ranking, and role-based access control.
Tech Stack: Python, FastAPI, React, TypeScript, Sentence Transformers, PyTorch, PostgreSQL, SQLAlchemy, SHAP, Fairlearn, Docker.

Polymer Property Prediction
Developed an ML pipeline to predict seven polymer properties from SMILES representations, achieving a 0.877 leaderboard score using molecular descriptors, ensemble learning, and SHAP explainability.
Tech Stack: Python, RDKit, Pandas, NumPy, Scikit-learn, LightGBM, CatBoost, XGBoost, SHAP.

SyncBoard – Real-Time Collaborative Kanban Board
Engineered a collaborative task management application using React, TypeScript, Express.js, Socket.IO, and PostgreSQL, implementing real-time presence, fractional indexing, and secure authentication.
Tech Stack: React, TypeScript, Node.js, Express.js, Socket.IO, PostgreSQL, Prisma, Docker.

ACHIEVEMENTS AND CERTIFICATIONS

- **1st Prize** – Paper Presentation in BARNSTORMZ'26, Hindustan Institute of Technology.
- **5th Place** – Amalgam '26 : ML Hackathon, IIT Madras.
- **1st Place** – STEM Innovators Expo 2025, KPRIET.
- **2nd Place** – BIT Season 2 Hackathon; 2nd Place – Vibecode'26 Hackathon.
- NPTEL: Programming in Java – **Elite Gold**, **90%**
- **Neural Networks and Deep Learning** – Coursera, Andrew Ng.
